

MAGPOWR Digital Tension Meter

A low-cost way to monitor tension output, the Digital Tension Meter (DTM) is perfect for applications where access to tension control parameters is not required. Operators can mount a control away from the web to get feedback on current web tension via a backlit display and illuminated digits. The DTM is encased in high-impact plastic to withstand demanding conditions. A sealed front panel meets industry-standard NEMA 4X/IP65 specifications for wash-down and dusty environments.

This meter can be used with any tension sensor amplifier by reading the 0 to 1 mA meter output reference.

Key Features:

- Easy to read LCD
- Built-in scaling
- Auto zeroing circuit
- Compact enclosure fits DIN standard cut-out
- NEMA 4X/IP65 sealed front panel bezel
- Wire connections made via screw clamp type terminals
